We have a team of highly professional Engineers and technical persons they are working more then two decade of this field which delivers predetermined quantity of oil to various lubrication points of a machines at preset time intervals. It is products of careful study and detailed analysis of present needs of lubrication system. We at LUBDROP™ PRODUCTS are committed to a quality product with wide flexibility for user to implement a suitable system. LUBDROP™ Centralised Lubrication System consists of highly efficient positive displacement pump driven by FHP motor, relief valve, pressure switch, pressure gauge, float switch & level gauge or as per customer specification. These are offered in various different models. To safeguard the system from overloading a relief valve is provided in the line. By adjusting the relief valve, the line pressure can be set to the required value. The line pressure can be read on the pressure gauge provided on the unit. The lubrication unit is designed for intermittent operations. The frequency of operation of the pump is controlled through the electronic controller. If there is any fault in the system like choking of filter, low oil level, leakage and motor or pump failure,...
